If you don't build with **Stabledge premium sub-flooring**, you're paying too much, working too much, or both.

It's raining, it's pouring, no swell in our flooring!

“As a builder trying to deliver a quality product in a hypercompetitive market, I need every dollar spent on premium materials to improve the bottom line.”

Value and the bottom line

When it comes to sub-flooring, you've probably already learned that “lowest priced” is a misleading phrase – one good rain and your savings are washed away, thanks to moisture-swollen edges that somebody's got to sand back down. And the most expensive premium product? Well, it may not swell up much, but neither will your profits.

Stabledge...the value leader

Norbord introduces the smarter alternative. It's called Stabledge, and as the name implies, it won't swell up when exposed to rain. Stabledge's anti-swell properties are better than any other sub-flooring product on the market, including plywood. We stand behind that promise with a 50-Year Warranty.

Jobsite efficiency

Stabledge delivers the speed and simplicity of installation and long-term performance you want. Its tongue & groove edges fit together perfectly, without hassle. Sheets lay flat without buckling or warping, regardless of weather. Stabledge is strong, solid, dimensionally stable and consistent from panel to panel. There are no knots, core voids or de-lamination problems.

Saves your tools

Our **patented process** provides superior anti-swell properties while being jobsite-friendly. Other premium sub-flooring manufacturers, just add extra glue in an attempt to reduce edge swell. Builders working with Stabledge quickly discover how easy it is on their equipment. Saws stay sharper longer, drill bits keep drilling, nail guns keep nailing and screw heads don't snap off.

Extra features to make your job easier

Builders have proven Stabledge on the jobsite. Printed fastener guides make installation easy. Every Stabledge panel bears warranty and logo information on the sanded surface to show homebuyers your commitment to quality.

Code approved

Stabledge is code approved for use throughout North America and meets or exceeds PS2 Standards. All Norbord products are stamped by the APA – The Engineered Wood Association.
