

**NORCORE IS A  
PRECISION  
CALIBRATED  
CORE**

**SUITED TO APPLICATIONS  
THAT DEMAND EXACT  
THICKNESS TOLERANCES**

**NorCore Strand** is our standard, cost-effective strand panel that is available un-sanded, sanded on one-side or sanded on both sides.

**NorCore ESP** is a high-performance panel that is precision-sanded on both sides, it is engineered to be a replacement for particleboard and MDF.

**NorCore ESP Plus** is our strongest panel that is precision-sanded on both sides. It is engineered for the most demanding applications and is a high-quality substitute for plywood.

- Manufactured with a proprietary pressing technique that ensures flatness and consistency of core properties superior to structural panels such as plywood
- Panels can be precision-sanded to meet the most exacting applications
- The strength-to-weight ratio of NorCore panels exceeds composite wood-based panels such as particleboard and medium-density fiberboard
- Available thicknesses 3/8, 1/2, 5/8, 11/16, 3/4, 7/8, and in lengths from 6' to 24'
- CARB (California Air Resource Board)-exempt and contains no added urea-formaldehyde resins
